

Report on the work done on Website Updation:-

1. First of all check all the banners (bigrock, flipkart, Amazon etc. on every pages) Many are not aligned and has gone haywire. Rectify those and also add banners/ads in every page wherever possible

volunteer.php flipkart banner corrected. It wasn't looking good before.

Added amazon add in support us page.

Polls- bigrock and flipkart adds added on the polls page

Comment - bigrock and flipkart adds added on the comment page as well.

feedback.php - Properly aligned the printland banner.

2. Bring the comments and Poll links at the bottom near Site Map

The comments and the polls link has been send near the site map.

3. The searchbox needs to be placed somewhere else in the website and it should be visible in every pages (I repeat every single page)

Removed the border of the search, looks better now. And added the search in app.php,

internship.php, past intern pages, terms.php page and games index page.

4. The comments and poll page is very empty. Add the adds on the left and the the polls and comments on the right only (in the content area)

Added sidebars and adds in the comment and polls page to the left and bottom, shifted content to right side like all other pages.

5. The comments and poll page need to have more ads on the bottom of the page as well

Polls- bigrock and flipkart adds added on the polls page

Comment - bigrock and flipkart adds added on the comment page as well.

6. Add feedback, chat widgets in every page and not only the homepage. It was added by me previously from Zopim (Our Partner) check why it is not visible.

Zopim live chat is visible on the right bottom and the webengage feedback on the right side. added it to app.php, comment.php, poll.php, games.bnsatnalikafoundation.org pages as it was not present in these pages.

7. The forum thing is good only when it avoids spam. There is shitty crap/spam currently in it. Filter all those.

Added moderation queue. The registered and the newly registered users have been placed on moderation queue and only the administrator has been given full access and the power to moderate the posts. When the admin logs in and verifies the posts then only it will be posted.

8. The form needs to be articulated well. I dont want mix background of light brown and white (for form area)

Made the form background and the page background as the same color.

APPLICATION DEVELOPMENT:-

Used a new database bnsatucr_details1, the old database bnsatucr_details is still there.

The application has been successfully developed. To access it goto:-

www.bnsatnalikafoundation.org/bnsat&@/results.php

The password is: nagarmal91011 (for all pages..)

Once you enter the password all the candidates whose status has not been updated or “not updated” candidates will be displayed. To the extreme right there is a status column where for each candidate you can choose

- 1) Waitlist
- 2) Shortlist
- 3) Reject
- 4) None (default)

After choosing for required candidates click on “update and email”. If you have chosen to

waitlist, shortlist or reject a candidate, he/she will be mailed automatically about this status change from contactus@bnsatnalikafoundation.org . Now the other tabs are:-

- 1) Rejected candidates – Gives a list of all the rejected candidates.
- 2) Waitlisted candidates – Gives a list of all waitlisted candidates, here on the extreme right again you have a status column where you can reject , accept or keep the candidate on waitlist(default) . When you click on “update and email” all those candidates whose status has been changed from waitlist to some other status will be mailed about their corresponding status change whether they have been accepted or rejected.
- 3) Shortlisted candidates – Gives a list of all shortlisted candidates.

So this is the basic description of the application.
